Please read our Installation and operating manual for safety and installation guidance.

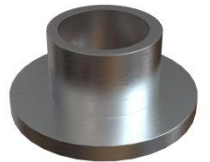

# Model ORBIT360

**Standard Flange**

**Flange with Cover**

### Standard Flange

The standard flange is approx. 2" in diameter and accepts a number 8 course drywall screw. We recommend a 2" long screw for most installations, screws are not included as we do not know what surface type you will be mounting onto so the length of the screw will vary ([see video](#)).

### Flange with Cover

Flange covers are designed to fit over existing flanges and hid the mounting screws from view and debris that may fall into screw heads ([see video](#)).

**Above Counter Compression**

**Below Counter Compression**

### Above Counter Compression

The above counter compression is approx. 2-1/2" wide and accepts a number 8 course drywall screw. Post can be secured down by either a side set screw or via compression bell which uses a wrench to tighten down (wrench included) ([see video](#)).

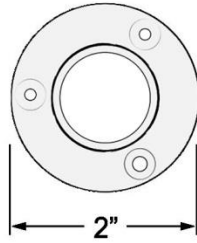

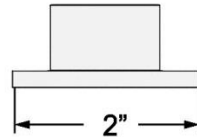

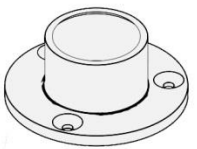

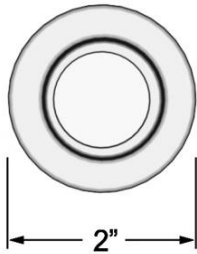

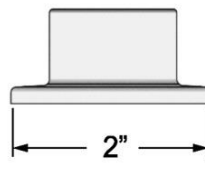

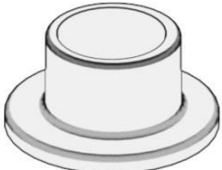

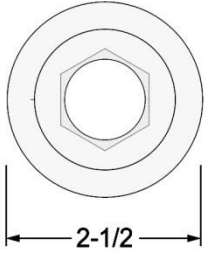

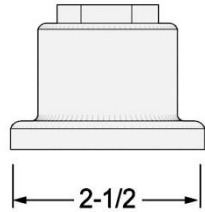

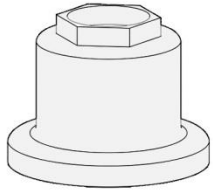

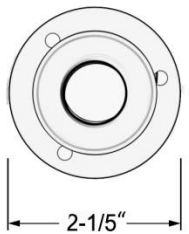

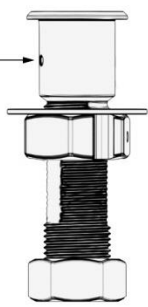

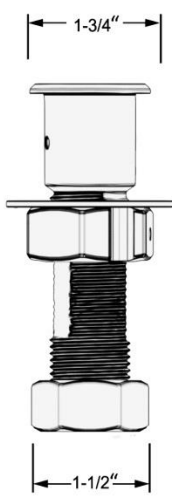

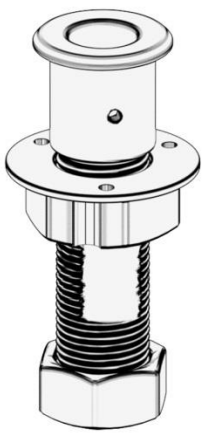

### Below Counter Compression

The below counter compression allows for thru the counter installs and allows for adjustment of post height after install. This flange can not only clamp onto counter but also compress onto post. It can also be reversed mounted so not to void out any solid surface warranty. Speed socket for 3/8" drive ratchet is included ([see video](#)).
